jul 22 2019 a formatted string literal or f string is a string literal that is prefixed with f or f these strings may contain replacement fields which are expressions delimited by curly braces

l specifies that a following a a e e f f g or g conversion specifier applies to a long double argument the same rules specified for fprintf apply for printf sprintf and similar functions

f strings are cute and remind me of ruby syntax but they don't seem to have a lot of advantages and as you've said they unnecessarily break compatibility with python 3.6

oct 4 2019 this is called f strings and are quite straightforward when using an f in front of a string all the variables inside curly brackets are read and replaced by their value

gmail is attempting to use double quotes inside of a f that uses double quotes which you can't do use single quotes for strings inside of f strings if you're using double quotes for the f

dec 3 2012 a few of these don t do anything interesting or even anything visible i have indicated those which don t do anything visually f3 s force reload visually does little

is there an easy way with python f strings to fix the number of digits after the decimal point specifically f strings not other string formatting options like format or for example let s s

reddit is a network of communities where people can dive into their interests hobbies and passions there s a community for whatever you re interested in on reddit

unlike f strings the placeholders are not expressions and you can t use arbitrary python expressions in the template this is a good thing you wouldn t want end users to be able to

the other answers are correct that python 3 6 or later is needed for f strings to work in standard python if for some reason you don t want to upgrade though you can run pip install future
