using a designed vector field to guide robots to follow a given geometric desired path has found a range of practical applications such as underwater pipeline inspection warehouse navigation and highway traffic monitoring it is thus in great need to build a rigorous theory to guide practical implementations with formal guarantees it is even so when multiple robots are required to follow predefined desired paths or maneuver on surfaces and coordinate their motions to efficiently accomplish repetitive and laborious tasks the book introduces guiding vector fields on euclidean spaces and riemannian manifolds for single robot and multi robot path following and motion coordination provides rigorous theoretical guarantees of vector field guided motion control of robotic systems and elaborates on the practical implementation of the proposed algorithms on mobile wheeled robots and fixed wing aircraft it provides guidelines for the robust reliable and safe practical implementations for robotic tasks including path following navigation obstacle avoidance and multi robot motion coordination in particular the book reveals fundamental theoretic underpinnings of guiding vector fields and applies to addressing various robot motion control problems notably it answers many crucial and challenging questions such as how to generate a general guiding vector field on any n dimensional riemannian manifold for robot motion control tasks do singular points always exist in a general guiding vector field how to generate a guiding vector field that is free of singular points how to design control algorithms based on guiding vector fields for different robot motion control tasks including path following obstacle avoidance and multi robot distributed motion coordination answering these questions has led to the discovery of fundamental assumptions a topological surgery to create a singularity free guiding vector field a robot navigation algorithm with the global convergence property a provably safe collision avoidance algorithm and an effective distributed motion control algorithm etc
