apr 25 2010 in java tm null is not a keyword but a special literal of the null type it can be cast to any
reference type but not to any primitive type such as int or boolean

before calling a function of an object i need to check if the object is null to avoid throwing a
nullpointerexception what is the best way to go about this i ve considered these methods

in java i am told that when doing a null check one should use instead of equals what are the reasons for this

oct 12 2013 formally null is a singleton member of the null type which is defined to be the subtype of every other java type null is a reference type and its value is the only reference

if a reference variable is set to null either explicitly by you or through java automatically and you attempt to dereference it you get a nullpointerexception the nullpointerexception npe

if null is a valid response you have to check for it if it s code that you do control however and this is often the case then it s a different story avoid using nulls as a response with

in java int is a primitive type and it is not considered an object only objects can have a null value so the answer to your question is no it can t be null but it s not that simple because

dec 7 2012 in java there isn t null values for primitive data types if you need to check null use integer class instead of primitive type you don t need to worry about data type difference

as we know int is a primitive data type and cannot be null in my program i want to do a condition check like int i but it says operator cannot be applied to int null

dec 13 2009 according to the java spec null is a type that can be assigned to an object variable as a value as noted in the comment you cannot instantiate or create variables of
