from the beginning of time humans have been driven by both a fear of the unknown and a curiosity to know we have always yearned to know what lies ahead whether threat or safety scarcity or abundance throughout human history our forebears tried to create certainty in the unknown by seeking to influence outcomes with sacrifices to gods preparing for the unexpected with advice from oracles and by reading the stars through astrology as scientific methods improve and computer technology develops we become ever more confident of our capacity to predict and quantify the future by accumulating and interpreting patterns from the past yet the truth is there is still no certainty to be had in this very short introduction jennifer gidley considers some of our most burning questions what is the future is the future a time yet to come or is it a utopian place does the future have a history is there only one future or are there many possible futures she asks if the future can ever be truly predicted or if we create

thinking about the future is essential for almost all organizations and societies states corporations universities cities ngos and individuals believe they cannot miss the future but what exactly is the future it remains a mystery perhaps the greatest mystery especially because futures are unpredictable and often unknowable the outcome of many factors known and unknown the future is rarely a simple extrapolation from the present in this important book john urry seeks to capture the many efforts that have been made to anticipate visualize and elaborate the future this includes examining the methods used to model the future from those of the rand corporation to imagined future worlds in philosophy literature art film tv and computer games he shows that futures are often contested and saturated with different interests especially in relation to future generations he also shows how analyses of social institutions practices and lives should be central to examining potential futures and issues such as who owns the future the future seems to be characterized by wicked problems there are multiple causes and solutions long term lock ins and complex interdependencies and different social groups have radically different frames for understanding what is at stake urry explores these issues through case studies of 3d printing and the future of manufacturing mobilities in the city and the futures of energy and climate change
