this is the state of the art report prepared by the rilem tc application of super absorbent polymers sap in concrete construction it gives a comprehensive overview of the properties of sap specific water absorption and desorption behaviour of sap in fresh and hardening concrete effects of the sap addition on rheological properties of fresh concrete changes of cement paste microstructure and mechanical properties of concrete furthermore the key advantages of using sap are described in detail the ability of this material to act as an internal curing agent to mitigate autogenous shrinkage of high performance concrete the possibility to use sap as an alternative to air entrainment agents in order to increase the frost resistance of concrete and finally the benefit of steering the rheology of fresh cement based materials the final chapter describes the first existing and numerous prospective applications for this new concrete additive

recent years have seen enormous advances in the technology of concrete as a material through which its strength compactness and ductility can reach levels never dreamed of before thanks to these improved material properties the strength and durability of concrete structures is greatly improved their weight and dimensions reduced the scope of concrete as a structural material is widened and despite the higher material costs overall economy is possible with positive impacts on sustainability as well similar advances are underway in reinforcing materials notably high strength steel and fibre reinforced polymers and in the way they are combined with concrete into high performance structures developments in materials and equipment as well as new concepts have lead to innovative construction techniques reducing cost and construction time and making possible the application of concrete under extreme conditions of construction or environment all these advances will be highlighted in the book by the top experts in the field of concrete structures namely those currently active in the field s leading and truly international scientific and technical association the international federation of structural concrete fib fib international org audience practicing engineers and firms academics researchers and graduate students will all find the book timely informative and very interesting

examining the proliferation of reinforced concrete construction in the united states after 1900 historian amy e slaton considers how

scientific approaches and occupations displaced traditionally skilled labor the technology of concrete buildings little studied by historians of engineering architecture or industry offers a remarkable case study in the modernization of american production the use of concrete brought to construction the new procedures and priorities of mass production these included a comprehensive application of science to commercial enterprise and vast redistributions of skills opportunities credit and risk in the workplace reinforced concrete also changed the american landscape as building buyers embraced the architectural uniformity and simplicity to which the technology was best suited based on a wealth of data that includes university curricula laboratory and company records organizational proceedings blueprints and promotional materials as well as a rich body of physical evidence such as tools instruments building materials and surviving reinforced concrete buildings this book tests the thesis that modern mass production in the united states came about not simply in answer to manufacturers search for profits but as a result of a complex of occupational and cultural agendas robert friedel university of maryland college park
