we are delighted to present the ecdl 2004 conference proceedings from the 8th european conference on research and advanced technology for digital libraries at the university of bath bath uk this followed an impressive and geographically dispersed series of locations for previous events pisa 1997 h aktion 1998 paris 1999 lisbon 2000 darmstadt 2001 rome 2002 and trondheim 2003 the conference reflected the rapidly evolving landscape of digital libraries both in technology developments and in the focus of approaches to implementation an emphasis on the requirements of the individual user and of diverse and distributed user communities was apparent in addition the conference programme began to address possibly for the first time the associated themes of e research e science and e learning and their relationship to digital libraries we observed increasing commonality in both the distributed information architectures and the technical standards that underpin global infrastructure developments digital libraries are integral to this information landscape and to the creation of increasingly powerful tools and applications for resource discovery and knowledge extraction digital libraries support and facilitate the data and information flows within the scholarly knowledge cycle and provide essential enabling functionality for both learners and researchers the varied and innovative research activities presented at ecdl 2004 demonstrate the exciting potential of this very fast moving field the 148 papers 43 posters 5 panels 14 tutorials and 4 workshops submitted this year were once again of the highest quality

artificial intelligence a modern approach 3e is ideal for one or two semester undergraduate or graduate level courses in artificial intelligence it is also a valuable resource for computer professionals linguists and cognitive scientists interested in artificial intelligence the revision of this best selling text offers the most comprehensive up to date introduction to the theory and practice of artificial intelligence

advanced al and data science for e commerce and financial services is a forward looking book that captures the intelligence driving today's digital economy this book bridges theory and practice by tracing the journey of artificial intelligence from its foundational principles to its most advanced real world applications in commerce and finance it is designed not merely to explain algorithms but to illuminate how data driven intelligence reshapes decision making customer experiences and enterprise strategy the book unfolds as a structured narrative beginning with the evolution of al and the mathematical logic beneath modern learning systems it then guides readers through data science infrastructure feature engineering predictive modeling and deep learning gradually building the technical confidence required to design scalable al solutions practical relevance remains central with dedicated chapters exploring al applications in e commerce and financial services including personalization pricing risk modeling fraud detection and automated decision systems beyond technical mastery the book emphasizes responsibility and sustainability topics such as mlops governance ethical al and regulatory compliance highlight the importance of building trustworthy and maintainable systems the final chapters look ahead examining emerging technologies such as generative al edge

during a recent visit to china to give an invited lecture on legal argumentation i was asked a question about conventional opinion in western countries if legal r soning is thought to be important by those both inside and outside the legal prof sion why does there appear to be so little attention given to the study of legal logic this was a hard question to answer i had to admit there were no large or well established centers of legal logic in north america that i could recommend as places to study going through customs in vancouver the customs officer asked what i had been doing in china i told him i had been a speaker at a conf ence he asked what the conference was on i told him legal logic he asked 1 whether there was such a thing he was trying to be funny but i thought he had a good point people will question whether there is such a thing as legal logic and some recent very prominent trials give the question some backing in the common opinion but having thought over the question of why so little attention appears to be given to legal logic as a mainstream subject in western countries i think i now have an answer the answer is that we have been looking in the wrong place

this book responds to the need to distinguish human creations from those produced by ai it does so by tracing human attributes of authorship and inventorship in statutory requirements for protection and ownership in european copyright and patent laws its main contribution lies in exposing shortcomings in how the laws are applied in the uk germany and france it shows that the human origin of creations is traditionally inferred from their expressive form or technical character given the advancements in ai such inferences are no longer legitimate what is more these shortcomings may eventually lead to granting copyright or patent protection where none is lawfully permitted or sufficiently justified to remedy the situation this book offers

doctrinal and conceptual amendments and proposes law reforms to implement them this book guides authorities practitioners and students through the main arguments of the debate concerning copyright and patents for objects entirely or partly generated by ai it also makes original contributions to advance the ongoing academic and policy debates on ai and intellectual property law

machine learning fundamentally learns from the past experiences seen data to make predictions about future unseen data predictions in nature are often uncertain microbiome data have unique characteristics including high dimensionality over dispersion sparsity and zero inflation and heterogeneity thus machine learning involving microbiome data for predicting the outcome of phenotypes is even more uncertain than learning those data from other fields machine learning for microbiome statistics poses many challenges for evaluating the prediction performance using appropriate metrics and independent data validation this unique book aims to address the challenges of machine learning statistics emphasize the importance of performance valuation by appropriate metrics and independent data and describe several important concepts of machine learning statistics such as feature engineering and overfitting it comprehensively reviews commonly used and newly developed machine learning models for microbiome research specifically this book provides the step by step procedures to perform machine learning of microbiome data including feature engineering algorithm selection and optimization performance evaluation and model testing it comments the benefits and limitations of using machine learning for microbiome statistics and remarks on the advantages and disadvantages of each machine learning algorithm it will be an excellent reference book for students and academics in the field presents a thorough overview of machine learning algorithms for microbiome statistics performs step by step procedures to perform machine learning of microbiome data using important supervised learning algorithms including classical ensemble learning and tree based models describes important concepts of machine learning including bias and variance tradeoff accuracy and precision overfitting and underfitting model complexity and interpretability and feature engineering investigates and applies various cross validation techniques step by step introduces confusion matrix and its derived measures comprehensively describes the properties of f1 matthews correlation coefficient mcc area under the receiver operating characteristic curve auc roc and area under the precision recall curve auc pr as well as discusses their advantages and disadvantages when using them for microbiome data offers all related r codes and the datasets from the authors first hand microbiome research and publicly available data

those who venture into the realm of ecosystem advantage will discover a complex web of relationships interfaces and processes designed to efficiently deliver customer value one important factor in the process of building an enterprise that is often overlooked is that a business s success is inevitably entwined with the performance of its surrounding ecosystem spanning a tapestry of firms institutions and individuals this ecosystem forms the linchpin of success however the journey to prosperity demands more than the mere existence of a thriving ecosystem it necessitates adept management and cultivation

of relationships within it ecosystem dynamics and strategies for startups scalability uncovers the nuances of connecting complementary participants navigating uncertainty among diverse partners and securing a substantial share of the created value as a testament to its academic rigor the book discerns that fostering an ecosystem often hinges upon a lead firm orchestrating key value contributing elements or that the government enacting conducive policies the book also extends far into diverse facets of resource management ecosystem construction and startup scalability all rooted in comprehensive theoretical analysis bridging theory and practice it furnishes case studies and best practices to accentuate these concepts as economies worldwide reset post pandemic the book assumes greater relevance illuminating the path for startups to thrive in emerging markets scholars postgraduates practitioners and policymakers alike stand to gain a wealth of knowledge from the evolution of resource management and ecosystems to their pivotal roles in startup success
